SERIOUS ABOUT SOUND

For over 40 years MTX Audio has been a leader in the mobile electronics industry. From our early days of developing some of the first available aftermarket car audio products to the present day where we continue to design and engineer some of the most sought after components on the market, MTX continues to be "Serious About Sound". We know how passionate off-road enthusiasts are when it comes to their machines. They play hard, get dirty and expect a certain level of performance from their UTV's. It's this lifestyle that MTX engineers keep in mind when developing new products for our Powersports line-up. Developed to withstand the potential abuse from a hard day of riding or the exposure to the elements from simply being outdoors for days at a time, we make sure our products are built using the best available materials and are thoroughly tested beyond industry standards to provide you with a lifetime of use and enjoyment.

MTX is committed to providing you with an outstanding product that you will be proud to own and a truly remarkable listening experience wherever you are. We are dedicated to ensuring that you get "More Than Xpected" in every MTX product you purchase.

VEHICLE-SPECIFIC

AUDIO SOLUTIONS

While many companies can offer you a product, at MTX, we pride ourselves on being able to offer you a solution. We don't base our designs off computer models or measured drawings. Our vehicle specific audio solutions are designed and built from the ground up using the actual machines as our guide. This allows us to create a system that works around the machines design and seamlessly integrates as though it always should have been there. Additionally, it's not just how the system fits, but how it sounds that makes it great. Our acoustic engineers test and retest continuously until they perfect the balance between the audio output and quality. This ensures your audio system delivers crisp highs and pounding bass output. Whether you're cruising the trails at 60 MPH or just hanging out at camp enjoying good company and music, our vehicle specific audio solutions deliver.
